

Employee Leave Management System on AWS

Volume 2

Lambda Development

Create Python 3.12 Lambda.

Implement POST /leave/apply.

Implement GET /leave/status.

Implement PUT /leave/update.

API Gateway

Create REST API.

Resources: /leave/apply, /leave/status, /leave/update.

Enable Lambda Proxy Integration.

Deploy to dev stage.

Testing

Test Lambda from AWS Console.

Test APIs with Postman.

Verify DynamoDB records.

Verify SNS email.

Verify CloudWatch logs.

Troubleshooting

403 Missing Authentication Token → Wrong URL or resource.

500 Internal Server Error → Check CloudWatch.

SNS not sending → Confirm email subscription.

DynamoDB errors → Check IAM role and table name.
